Search Is Improving
Review Questions

You can use the same or different examples for questions (1)-(3).

1. Give an example of something you can't find using a search engine now, and explain how *a change in search technology* might make it possible to find that information in the future.

2. Give an example of something you can't find using a search engine now, and explain how *a change in a law* might make it possible to find that information in the future.

3. Give an example of something you can't find using a search engine now, and explain how *a change in an online service's policies* might make it possible to find that information in the future.

4. Provide two examples of offline data that can be digitized and put online.
